

Installing the **LeverKnot**® on the bottom rope of a volleyball net.

For use with 1/4 inch rope.

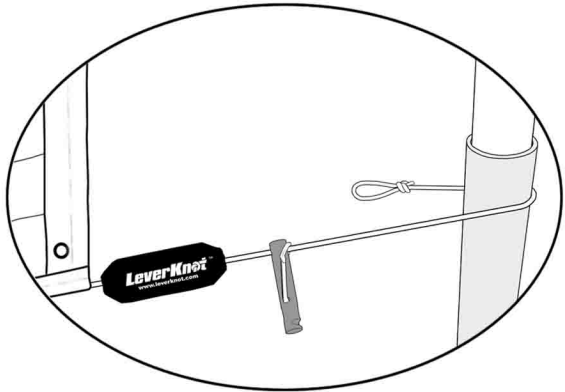

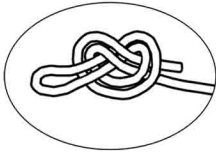

Put up the volleyball net. Center it on the court but don't attach the bottom rope. Remove the existing bottom rope tensioning system, removing any knots in the rope as necessary.

Thread the bottom rope through one of the covers. Then thread the rope through the hole in the end of the **LeverKnot** above the D-ring as shown.

Place the bottom rope around the pole and tie a 2 1/2 inch loop in the rope about a foot away from the pole.

Tie the loop by folding the rope back on itself and tying a simple overhand knot.

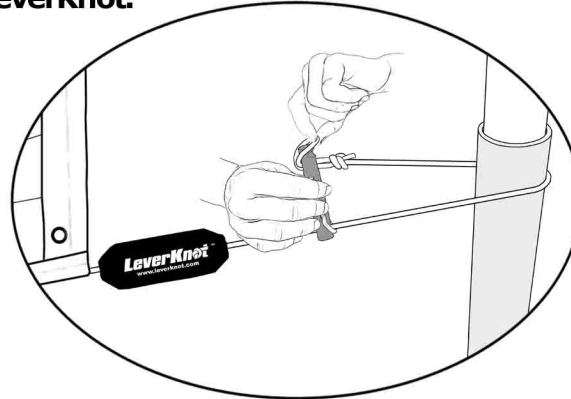

Repeat the above steps on the opposite side of the net.

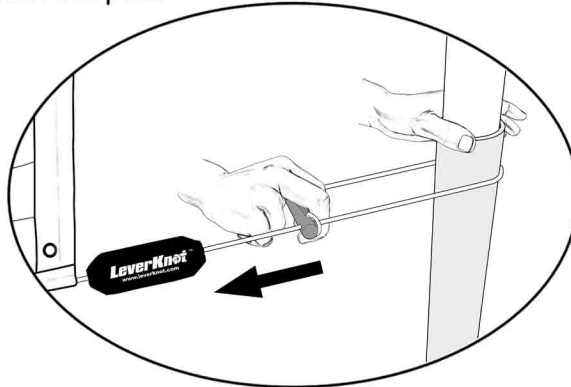

Using the **LeverKnot**® to tighten the bottom rope of a volleyball net.

Wrap the looped end of the rope around the pole.

Place the loop through and over the end of the **LeverKnot**.

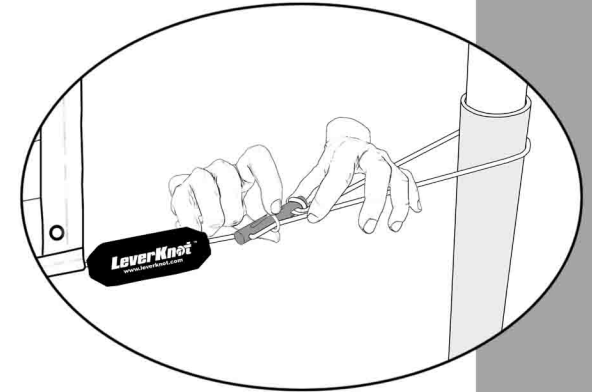

To tighten, pull and rotate the **LeverKnot** away from the pole.

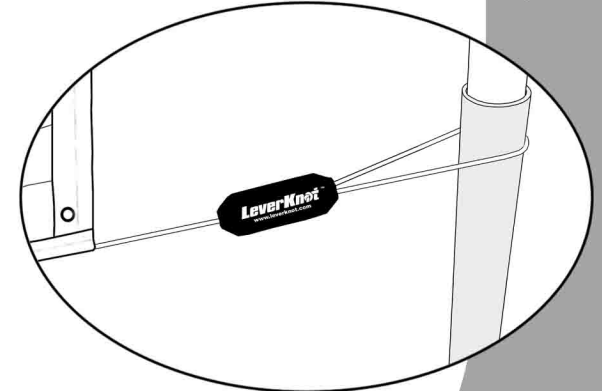

When the **LeverKnot** is released it rotates further back towards the rope and stays in place.

NOTE: It may be necessary to adjust where the loop is tied in the rope to provide the widest range of adjustment for your net system. The recommended position of the **LeverKnot** is approximately midway between the pole and the net when the rope is at full tension.

Lock the **LeverKnot**® in place by pinching the end of the **LeverKnot** and the rope together and sliding the metal D-ring up within the slot until it snaps into the notch.

Expand the end of the cover and pull it over the **LeverKnot** and the knot in the rope.

**It's simple. It's covered.
It's tight.**

To remove:

Uncover by pulling the cover toward the net. (The cover stays on the rope so it won't get lost.)

Unlock by pinching the end of the **LeverKnot** and the rope together and pushing the D-ring in and down within the slot.

Rotate the **LeverKnot** away from the rope and slide it towards the pole.

Remove the loop from the end.
